

Dementia awareness month

What are the characteristics and outcomes of patients with dementia admitted to NHS hospitals in England?

Methodology

- Data was extracted from Hospital Episode Statistics for the financial years 2019-2024.
- People with a diagnosis of dementia were included.
- Patients were described by age group and biological sex.
- The diagnosis on admission were recorded.
- The number of deaths were recorded.
- The number of days from first hospital admission with a diagnosis of dementia recorded to death were recorded for patients who died in hospital.

Secondary care data is taken from the English Hospital Episodes Statistics (HES) database produced by NHS Digital (NHS Digital, <http://content.digital.nhs.uk/hes>) Copyright; 2024, Re-used with the permission of NHS Digital. Overall mortality and time to mortality

- There were 602,650 persons admitted with a diagnosis of dementia over the 5 years of data.
- 139,562 persons had a death recorded in hospital.
- The median time (midpoint number of days) from the first admission with a diagnosis of dementia to death, in those people who died was 35 days.
- The mean time (all days divided by number of deaths) was 219 days.
